

Cybersecurity 2023:

**Essentials for Small Business:
Protecting Your Digital Assets in the
Modern Age**

**Every employee needs these
Cyber Literacy skills
to stay safe online.**

Common Cyber Crime Attacks

- Ransomware
- Business Email Compromise
- Remote Access Trojans
- Wire Fraud

**ChatGPT can
write this
malware for
you! Fewskillz
required.**

Cybersecurity Preparedness

The Three Pillars

1

Policy & Process

1. Risk Assessment is key!
2. Cyber Governance Policy
3. Patching and Incident Mgmt. Processes

2

People

4. Teach **Cyber Literacy**
 - Attackers
 - Methods
 - Cybersecurity skills to prevent
5. Run educational Phishing Tests and Simulations (demo ahead)

3

Technology

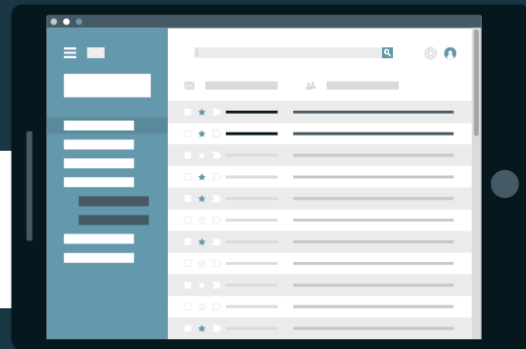

6. Deploy and validate Safeguards
 - Two-Factor Authentication
 - Password Manager
 - Anti-virus, End Point Protection
 - Email Security (SPAM)
 - Backups (Verify)
7. Data Privacy
8. Cyber Insurance

Two Skills for the 21st Century

90% of all breaches are caused by human error: a Social Engineering attack leading to password compromise or a successful phishing attack.

Avoiding Phishing emails:

- Understand the #1 online threat you face.
- Learn 6 questions to ask.
- Spot and delete phishing attack emails.

Employee Call to Action

- With 90% of breaches traced to human error, employees must learn:
 - good password hygiene
 - A password manager, and
 - how to spot and avoid phishing attacksto protect themselves personally and professionally.

CYBERSECURITY 101 30
